

Post Processing Additive Parts

ISO 9001:2015 Certified

Deburring, Polishing, Support Structure Removal, Texturizing

3D Printing, Layered Manufacturing, Rapid Prototyping, Additive Fabrication

Additive components rarely meet surface standards without post processing. Post processing for additive parts is an important step in the manufacturing process. It's the final stage where parts receive a market ready finish.

ISO Finishing works with companies using additive processes in industries ranging from aerospace to medical device manufacturers. Each industry requires attention to the finest details, and processing to exacting standards.

ISO Finishing has the experience working on all types of materials and the ideal partner for additive manufacturing companies. We simply produce the best surface finishes in the industry. To learn more information or for free sample processing, contact us at **1-844-623-7998**.

Additive Finishing Services

ISO Finishing offers the following surface finishing techniques specific to additive manufacturing:

- Centrifugal Barrel Polishing
- Deburring
- Deflashing
- RADIUSING
- Support Structure Removal
- Texturizing

Try ISO Finishing. Simple, Free!

Quality and service are our primary focus. The best way to prove to you that our quality far exceeds that of others is to offer our services by processing your sample at no charge. Provide us with some basic information, and we will take care of the shipping.

Benefits to Finishing AM Products

ISO Finishing has developed documented processes designed to ensure each finished part exceeds the most demanding requirements. Reducing surface roughness for additive manufacturing is extremely important. At ISO Finishing, surface preparation is the most important step in creating a beautiful and functional finish.
